

## **Diccoplast Plus TIX**

DESCRIPTION	A two-component acid-catalyzed primer.		
PRODUCT FEATURES AND RECOMMENDED USES	<ul> <li>Especially designed for vertical surfaces. The primer does not sag but levels evenly</li> <li>An easy-to-apply primer with superior filling properties. It is easy to sand and ensures the high-quality appearance of the final surface</li> <li>A fast-drying primer for interior use. It does not contain any aromatic solvents, enabling a safer working environment</li> <li>The emission level of this product fulfils the requirements of E1 classification for surface treatment materials. The product has been tested according to the standard EN 717-1, and its formaldehyde emission rate is less than 0.124 mg/m3 air</li> <li>Recommended for furniture, doors and other interior wooden and fibre board surfaces</li> </ul>

## **Diccoplast Plus TIX**

## **APPLICATION INSTRUCTIONS**

Surface preparation	Remove dust, loose particles and other impurities from the surface. Wood surfaces must be sanded with sandpaper P150–320. Sanding prior to the next application with sandpaper P240–400. All sanding dust must be removed.
Recommended topcoats	Diccoplast 30, Diccoplast Plus TIX, Dicco Flex 30.
Application conditions	The surface to be treated has to be clean and dry. The moisture content of wood has to be below 20%. During application and drying temperature of the air, substrate and product must be over +18°C and relative humidity of the air below 70%. Good ventilation

**Mixing components** First stir base and hardener separately. The correct proportions of base and hardener must be mixed thoroughly before use. Use power mixer for mixing. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface and weaken the properties of the coating.

Do not use iron containers as mixing container. Instead use plastic, enamel or acid resistant steel containers.

is required to ensure optimal result. Product can be dried with or without oven.

ApplicationFor airless spraying, the product is thinned approximately 5–20% to the viscosity 25–50s<br/>(DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 80–180 bar. Spray angle<br/>shall be chosen according to the shape of the object.

For air-assisted airless spraying, the product is thinned approximately 5–20% to the viscosity 25–50s (DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 40–120 bar. Atomising air pressure should be about 1–3 bar. Spray angle shall be chosen according to the shape of the object.

For conventional spraying, the product is thinned approximately 10–20% to the viscosity 20–50s (DIN4). Recommended nozzle tip is 1.4–1.8 mm and pressure 2–3 bar.

Thinners Thinner 1027, Thinner 1033

Cleaning of equipment Thinner 1027 or 1033.

VOCThe Volatile Organic Compounds amount is 395 g/litre of paint mixture.<br/>Maximum VOC content in ready to use paint mixture (thinned 30% by volume) is 480 g/l.<br/>VOC 2004/42/EC (cat A/j) 500 g/l (2010)

**HEALTH AND SAFETY** Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets.

A health and safety data sheet is available on request from Tikkurila Oyj.
