

## **Diccoplast Primer**

DESCRIPTION	A two-component acid-catalyz	ed primer.	
PRODUCT FEATURES AND RECOMMENDED USES	<ul> <li>A fast drying primer with good filling and sanding properties</li> <li>Emission levels of this paint fulfils the E1-classification. Paint has been tested according to EN 717-1, and formaldehyde emission is less than 0.124 mg/m³ air</li> <li>Recommended for furniture, doors and other similar wooden and fibre board surfaces</li> </ul>

## **Diccoplast Primer**

## **APPLICATION INSTRUCTIONS**

APPLICATION INSTRUCTIONS		
Surface preparation	Remove dust, loose particles and other impurities from the surface. Wood surfaces must be sanded with sandpaper P150–320. Sanding prior to the next application with sandpaper P240–400. All sanding dust must be removed.	
Recommended topcoats	Diccoplast 30, Diccoplast 30 TIX.	
Application conditions	The surface to be treated has to be clean and dry. The moisture content of wood has to be below 20%. During application and drying temperature of the air, substrate and product must be over +18°C and relative humidity of the air below 70%. Good ventilation is required to ensure optimal result. Product can be dried with or without oven.	
Mixing components	First stir base and hardener separately. The correct proportions of base and hardener must be mixed thoroughly before use. Use power mixer for mixing. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface and weaken the properties of the coating.	
	Do not use iron containers as mixing container. Instead use plastic, enamel or acid resistant steel containers.	
Application	For airless spraying, the product is thinned approximately 10–20% to the viscosity 25– 60s (DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 80–140 bar. Spray angle shall be chosen according to the shape of the object.	
	For air-assisted airless spraying, the product is thinned approximately 5–20% to the viscosity 25–60s (DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 40–120 bar. Atomising air pressure should be about 1–3 bar. Spray angle shall be chosen according to the shape of the object.	
	For conventional spraying, the product is thinned approximately 10–20% to the viscosity 25–40s (DIN4). Recommended nozzle tip is 1.4–1.8 mm and pressure 2–3 bar.	
Thinners	Thinner 1027, Thinner 1033	
Cleaning of equipment	Thinner 1027 or 1033.	
VOC	The Volatile Organic Compounds amount is 400 g/litre of paint mixture. Maximum VOC content in ready to use paint mixture (thinned 20 % by volume) is 480 g/l. VOC 2004/42/EC (cat A/j) 500 g/l (2010).	
HEALTH AND SAFETY	Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets. A health and safety data sheet is available on request from Tikkurila Oyj.
