

Merit 20

DESCRIPTION

A two-component acid-catalyzed lacquer.

PRODUCT FEATURES AND RECOMMENDED USES

- The lacquer forms a very hard film with good scratch resistance. Its high solids content enables outstanding filling properties
- Gives the surface a silky and smooth semi-matt appearance. The durable high-quality product highlights the design of the lacquered object
- Wooden surfaces can be colored with either the solvent-borne Dicco Color or the water-borne Akvi Color stain before applying Merit 20. The lacquer enhances the appearance of stained wood
- The emission level of this product fulfils the requirements of E1 classification for surface treatment materials. The product has been tested according to the standard EN 717-1, and its formaldehyde emission rate is less than 0.124 mg/m³ air
- Recommended for furniture, doors and other similar wooden surfaces

TECHNICAL DATA

Volume solids 50±2%

Weight solids 57±2%

Specific gravity 1.0 kg/l

Mixing ratio
Lacquer 100 parts by volume Merit 20
Hardener 10 parts by volume 006 2098

Pot life (+23°C) 48 hours

Recommended spreading amounts and theoretical coverage

Recommended spreading amounts (unthinned)		Theoretical coverage
wet	dry	
80–100 g/m ²	40–50 µm	10–12 m ² /l

Practical coverage depends on the application method, conditions and the shape and roughness of the surface to be treated.

Drying times

80–100 g/m ²	+23°C	+50°C
Touch dry, after	20–30 min	10–15 min
Dry to sand, after	3–4 h	30–40 min
Dry to stack, after	24 h	60–70 min

Stacking temperature below +35°C.

Drying and recoating times are related to the film thickness, temperature, the relative humidity of the air and ventilation.

Gloss Semi-matt.

Color shades Clear

Merit 20

APPLICATION INSTRUCTIONS

Surface preparation	Remove dust, loose particles and other impurities from the surface. Wood surfaces must be sanded with sandpaper P150–320. Sanding prior to the next application with sandpaper P240–400. All sanding dust must be removed.
Recommended primers	Merit Sanding, Merit 20, Merit 30, Merit 80.
Application conditions	The surface to be treated has to be clean and dry. The moisture content of wood has to be below 20%. During application and drying temperature of the air, substrate and product must be over +18°C and relative humidity of the air below 70%. Good ventilation is required to ensure optimal result. Product can be dried with or without oven.
Mixing components	First stir base and hardener separately. The correct proportions of base and hardener must be mixed thoroughly before use. Use power mixer for mixing. Insufficient mixing or incorrect mixing ratio will result in uneven drying of the surface and weaken the properties of the coating. Do not use iron containers as mixing container. Instead use plastic, enamel or acid resistant steel containers.
Application	For airless spraying, the product is thinned approximately 5–20% to the viscosity 20–45s (DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 100–160 bar. Spray angle shall be chosen according to the shape of the object. For air-assisted airless spraying, the product is thinned approximately 5–20% to the viscosity 20–45s (DIN4). Recommended nozzle tip is 0.011"–0.015" and pressure 40–140 bar. Atomising air pressure should be about 1–3 bar. Spray angle shall be chosen according to the shape of the object. For conventional spraying, the product is thinned approximately 5–20% to the viscosity 20–45s (DIN4). Recommended nozzle tip is 1.4–1.8 mm and pressure 2–3 bar.
Thinners	Thinner 1027, Thinner 1033
Cleaning of equipment	Thinner 1033 or 1027.
VOC	The Volatile Organic Compounds amount is 420 g/litre of paint. VOC content of the paint mixture (thinned 20% by volume) is 500 g/l.

HEALTH AND SAFETY	Containers are provided with safety labels, which should be observed. Further information about hazardous influences and protection are detailed in individual health and safety data sheets. A health and safety data sheet is available on request from Tikkurila Oyj.
